

How to permanent remove files from your computer

This program offers a fast and simple way to protect privacy by erasing Web browsing and application history. The ability to wipe free disk space according to secure algorithms is a bonus, but it would be nice if the program also could shred files and folders. In the final analysis, You can choose for Computer Washer to overwrite traces of your activity up to 100 times. The system is called "adding bleach to your wash," which is clever because bleach gets rid of everything in a laundry load, including things you don't want it to, such as the color in your newest shirt. This program is already effective since it has the standard DoD 5220.22-M, NSA and Gutmann overwriting options (which overwrite your files 3, 7 and 35 times, respectively). It's made even more effective with the option to overwrite your files 100 times.

Upon launch, the program automatically scans your PC for supported applications, including such commonplace ones as Adobe Acrobat and RealPlayer. Clicking the Wash Now button literally leaves your browser's cache, cookies, the history, and the temporary files list as clear as the day Windows was first installed. If you want more control, you can specify exactly what components to clean via the Wash Setup icon. Computer Washer has very few flaws, making it a fine pick for anyone concerned with privacy issues.□

□

Privacy Software Highlights

- Expanded application cleaning for over 470 3rd party programs
- Updated interface makes it faster and easier to keep your privacy
- Erases tracks of sites you've visited
- Removes thousands of unnecessary files
- Increases computer performance
- Securely removes files using government standards
- Highly rated by independent reviews
- Can be set to clean your computer on a regular schedule

Browser Activity Eraser

Computer Washer cleans all aspects of your browser activity, including Internet history, address bar, cache, cookies, and more. Firefox users now enjoy the same online privacy protection that users of Internet Explorer, AOL and Netscape already enjoy.

Permanent Bleaching

Bleach, an encryption feature, completely overwrites files with random characters to make them unrecoverable. This feature is so powerful it exceeds the tough standards of the Department of Defense and the National Security Agency.

Free Space Cleaner

Free space on your computer contains portions of old and previously deleted files and documents. Computer Washer now cleans this area, making the files you deleted earlier permanently unrecoverable.

One-click Shredder

Computer Washer lets you simply and conveniently shred a folder and all of its contents, or just a single file, in one step. Just a simple right-click will permanently overwrite these files, making them unrecoverable.

Critical File Protection

Computer Washer includes built-in safety features to help prevent you from accidentally removing important files. Alerts prompt you to confirm your request to delete special folders, like system folders, My Documents, My Photos, and others, so they remain safe from unintentional deletions.

Smart Cookie Saver

Computer Washer deletes the cookies you don't want and lets you keep and save those you do. That way you maintain your preferred Internet settings and log-ins for all your favorite sites.

Flexible Washes

During a wash, Computer Washer automatically cleans the latest versions of your favorite programs such as Microsoft Office, Google Search Toolbar, iTunes, Adobe Flash Player, Adobe Acrobat and hundreds more, to keep these programs running smoothly.

Automatic Wash Cycles

You can set Computer Washer to automatically clean your system at specified intervals, like at shut down or start up. For added security, we recommend setting Computer Washer to wash when you close your Internet browser.

Total System Erase

Computer Washer can be set to fully erase your hard drive, files, programs and operating system for easy re-formatting. Consider using this feature if you're donating or selling your PC and you don't want your files to be seen by strangers.

Windows Vista® Compatible

Webroot Computer Washer now supports Microsoft's Windows Vista Operating System.

Minimum System Requirements

Windows Vista*, 2000, or XP

266 Mhz processor

5 MB hard drive space

64 MB RAM
